°C Temperature compensation
全温补高精度系列

► GENERAL DESCRIPTION

ACA816T / ACA826T is a full-temperature compensated high-precision single / dual-axis MODBUS output inclinometer professionally developed by Ruifen Technology for high-precision level measurement and leveling. The high-resolution 0.0005 ° can completely replace the traditional high-precision level. . Digital signal transmission, supporting professional computer software, accurate data measurement and recording, output interface RS232, RS485, RS422, TTL optional. The characteristics of non-contact installation make the ACA816T / ACA826T have super strong system integration, easy installation, just fix the sensor on the surface of the measured object with screws, the horizontal angle of the object can be automatically calculated, simple to use. It has strong resistance to external electromagnetic interference and strong ability to withstand shock and vibration. It has a great competitive advantage among domestic counterparts.
